Abstract:

PROBLEM TO BE SOLVED: To obtain a disinfection detergent for the skin, adhering to the skin in a foamy state, immediately becoming a flowable liquid, consequently capable of readily disinfecting and cleaning the skin without irritating the skin, not requiring to wash out the detergent with water after the use and not needing much labor for settlement after the use and to provide both a method for disinfecting and cleaning the skin using the disinfection detergent for the skin and a disinfecting and cleaning tool for the skin. **SOLUTION:** This disinfection detergent is characterized in that the disinfection detergent contains a cationic surfactant having a sterilizing action and water, is packed into a container having a foaming mechanism, foams and defoams in spraying. The method for disinfecting and cleaning the skin comprises applying the disinfection detergent for the skin to the skin so that the disinfection detergent for the skin foams and a time required for the disinfectant detergent for the skin from foaming to defoaming is ≤ 60 seconds. The disinfecting and cleaning tool for the skin is packed with the disinfection detergent for the skin. **COPYRIGHT:** (C)2001,JPO
